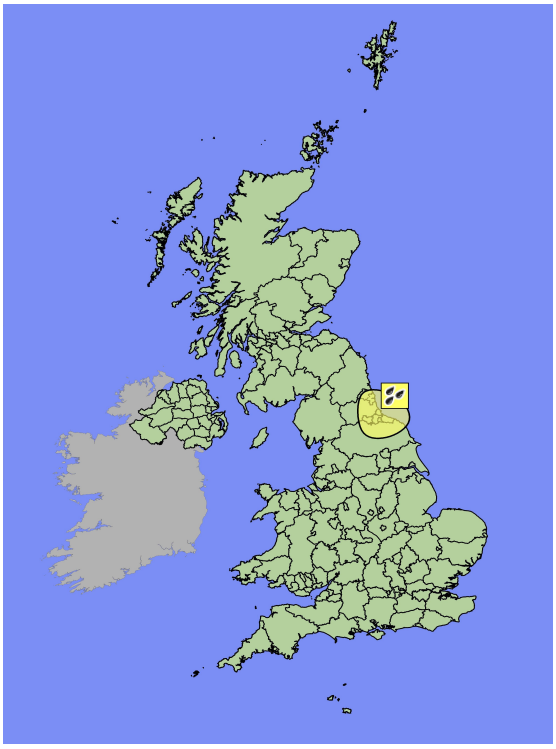
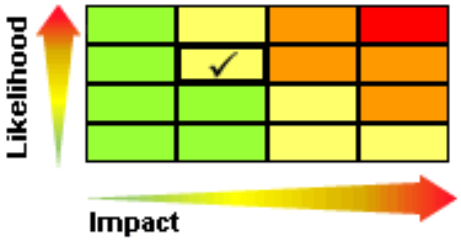
National Severe Weather Warning Service





Chief Forecasters Assessment
A fairly strong, northeasterly wind on the northwestern flank of the retreating low will maintain lines of showers across the area, with the potential for more than 20 mm locally - though most places seeing much less than this. Given heightened sensitivity to rainfall currently, this adds to the risk of flooding.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Tue, 27th Nov 2012** until **21:00 on Tue, 27th Nov 2012**

Whilst rainfall amounts will be much lower than of late, river levels are very high and further showers running into the area could exacerbate conditions locally. The public should therefore continue to be aware of the risk of ongoing flooding.
